j Sequence 45, Application US/08488225A

j Patent No. 6471956

GENERAL INFORMATION:
APPLICANT THE NOCKEFELLER UNIVERSITY

TITLE OF INVENTION: MODULATORS OF BODY WEIGHT, CORRESPONDING

TITLE OF INVENTION: NUCLEIC ACIDS AND PROTEINS, AND DIAGNOSTIC AND THERAPEUTIC US

NUMBER OF SEQUENCES:
ADDRESSES: Klauber & Jackson
STREET: 411 Hackensack Avenue
STREET: 411 Hackensack Avenue
CITY: Hackensack Avenue
STREET: 411 Hackensack Avenue
STREET: 407601

COMPUTRY: USA

ZIP: 07601

COMPUTRY: ENADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTRR: BM PC Compatible
OPREMATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION NUMBER: US/08/488,225A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TYPE: nucleic acid
STRANDENNESS: single
TOPOLOGY: linear
MOLECULE TYPE: DNA (primer)
DESCRIPTION: sequence tagged-site specific PCR primer sWSS2359
HYPOTHETICAL: NO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 20. Application US/08282197C

Sequence 20. Application US/08282197C

Patent No. 5871730

GENERAL INFORMATION:

APPLICANT: Brazinski, Rygzard

APPLICANT: Brazinski, Rygzard

APPLICANT: Beaulieu, Carole

TITLE OF INVENTION: Thermostable Xylanase DNA, Protein and

TITLE OF INVENTION: Thermostable Xylanase DNA, Protein and

TITLE OF INVENTION: Methods of Use

NUMBER OF SEQUENCES: 67

CORRESONDENCES: 67

CORRESONDENCE ADDRESS:

ADDRESSEE: Sterne, Kessler, Goldstein & Fox P.L.L.C.

STREET: 1100 New York Ave., Nw

CITY: Washington

STATE: DC

COUNTRY: USA

ZIP: 2000E

COMPUTER: EALDABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/282,197C

FILING DATE: 29-JUL-1994

CLASSIFICANTION: 435

APPLICATION: 435

APPLICATION: APPLICATION

APPLICATION: ASA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          °.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0.5%; Score 10.2; DB 1; Length 15; 80.0%; Pred. Sequence 16, Application US/09069434

Patent No. 6017708:

APPLICANT: HARDIN, Susan H.

APPLICANT: YING, Jun

ADDRESSE: FUNENCE: 23

CORRESPONDENCE ADDRESS:

ADDRESSE: Fulbright & Jaworski L.L.P.

STREET: 1201 McKinney, Suite 5100

CITY: Houston

STATE: Texas

COMPITER: Taxas

COMPITER: READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPITER: IBM PC Compatible

OPERATING SYSTEM: PC.DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION NUMBER: US/09/069,434

FILING DATE:

CLASSIFICATION NUMBER: P-41,698

REGISTRATION NUMBER: P-41,698

REGISTRATION NUMBER: P-01480USO

TELECOMMUNICATION NUMBER: P-01480USO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                           Sequence 9, Application US/09134246B

Patent No. 6207377
GENERAL INFORMATION:
APPLICANT: WANTE, Jay
APPLICANT: WANTE, Jay
APPLICANT: XU, Shuang-yong
TITLE OF INVENTION: Wethod For Construction Of Thermus-E. coli Shuttle
TITLE OF INVENTION: Vectors And Identification of Two Thermus Plasmid
TITLE OF INVENTION: Replicantion Origins
FILE REFERENCE: Thermus Shuttle Vector
CURRENT APPLICANTON NUMBER: US/09/134,246B
CURRENT FILING DATE: 1998-08-14
NUMBER OF SEQ ID NOS: 30
                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                           Sequence 47, Application US/08809297

Patent No. 5948650

GENERAL INPORMATION:
APPLICANT: ARAKI, SHIGEKI

TITLE OF INVENTION: GENETIC VARIETY IDENTIFYING METHOD IN
TITLE OF INVENTION: HOPS
NUMBER OF SEQUENCES: 48

CORRESPONDENCE ADDRESS:
ADDRESSEE: DELON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT,
ADDRESSEE: P.C.
STREET: 1755 SOUTH JEFFERSON DAVIS HIGHWAY, SUITE 400
CITY: ARLINGTON
STREET: VA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-08-809-297-47/c

Sequence 156, Application US/09281418

Sequence 156, Application US/09281418

Patent No. 6287769

GENERAL INFORMATION:

APPLICANT: House, Takazu

TITLE OF INVENTION: agment, Method of Assaying Microorganisms, Method of Analyzing

TITLE OF INVENTION: agment, Method of Assaying Contaminant

TITLE OF INVENTION: agment, Method of Assaying Contaminant

TITLE OF INVENTION: agment, Method of Assaying Contaminant

TITLE OF INVENTION: 1998-7

CURRENT APPLICATION NUMBER: US/09/281,418

CURRENT PELLING DATE: 1999-03-31

EARLIER FILING DATE: 1999-03-31

EARLIER PILING DATE: 1999-03-16

NUMBER OF SEQ ID NOS: 216

SEQ ID NO 156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 202, Application US/09281418
Patent No. 6287769
GENERAL INFORMATION:
APPLICATE: Inoue, Na. Application of Amplifying DNA Fragment, Apparatus for Amplifying DNA; IITLE OF INVENTION: Method of Amplifying Microorganisms, Method of Analyzing; IITLE OF INVENTION: agment, Method of Assaying Microorganisms, Method of Analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 29, Application US/08462467B

Patent No. 6210899
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Rosenbaum, Jan S
TITLE OF INVENTION: The Use of a BMP Protein Receptor
TITLE OF INVENTION: Co-Transfected With a Type II BMP Receptor and a Type I
TITLE OF INVENTION: BMP Receptor
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSEE: The Procter & Gamble Company
STREET: 11810 East Miami River Road
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

| Patenn No. 2827/6 |
| GENERAL INFORMATION: |
| APPLICANT: Inoue, Takakazu |
| TITLE OF INVENTION: Method of Amplifying DNA Fragment, Apparatus for Amplifying DNA F |
| TITLE OF INVENTION: agment, Method of Assaying Microorganisms, Method of Analyzing Mi |
| TITLE OF INVENTION: agment, Method of Assaying Contaminant |
| TITLE OF INVENTION: niems and Method of Assaying Contaminant |
| FILE PEPERSENCE: 9982-7 |
| CURRENT APPLICATION NUMBER: US/09/281,418 |
| EARLIER APPLICATION NUMBER: JP/1998/87651 |
| EARLIER FILING DATE: 1999-03-16 |
| MUMBER OF SEQ ID NOS: 216 |

US-09-004-838-139
; Sequence 139, Application US/09004838
; Patent No. 6350933
; GENERAL INPORMATION:
   APPLICANT: Michelmore, Richard W. APPLICANT: Shen, Kathy
; APPLICANT: Meyers Blake
; TITLE OF INVENTION: Procedures and Materials for TITLE OF INVENTION: Conferring Pest Resistance in Plants
NUMBER OF SEQUENCES: 140
; CORRESPONDENCE ADDRESS:
   ADDRESSEE: Townsend and Townsend and Crew LLP
TITLE OF INVENTION: nisms and Method of Assaying Contaminant FILE REFERENCE: 9982-7
CURRENT APPLICATION NUMBER: US/09/281,418
CURRENT FILING DATE: 1999-03-30
EARLIER FILING DATE: 1998-03-31
EARLIER FILING DATE: 1998-03-31
EARLIER FILING DATE: 1999-03-16
NUMBER OF SEQ ID NOS: 216
EARLIER FILING DATE: 1999-03-16
LENGTH: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

Patent No. 6150092
GENERAL INFORMATION:
APPLICANT: UCHIDA, T.,
APPLICANT: TANKKA, Y.,
APPLICANT: TANKKA, Y.,
APPLICANT: MATISTENSE NUCLEIC ACID
TITLE OF INVENTION: AN ANTISENSE NUCLEIC ACID
TITLE OF INVENTION: AND ANTISENSE NUCLEIC ACID
NUMBER OF SEQUENCES: 185
CORRESPONDENCE ADDRESS:
REGISTRATION NUMBER: 26,179
REPERENCE/DOCKET NUMBER: U9518-6
TELECOMMUNICATION INPORMATION:
TELEPAX: (attorney) (212) 246-8959
INPORMATION FOR SEQ ID NO: 197:
SEQUENCE CHARACTERISTICS:
LENGTH: 14 base pairs
TYPE: nucleic acid
SEQUENCE CHARACTERISTICS:
TYPE: nucleic acid
STRANDEDNES: double stranded
TOPOLOGY: linear
MOLECTLE TYPE: genomic DNA
DESCRIPTION: hepatitis B virus adr isolate,
DESCRIPTION: nucleotides 274 to 287
HYPOTHETICAL: no
ANTI-SENSE: no
ORIGINAL SOURCE:
ORIGINAL

Patent No. 6537751

GENERAL INFORMATION:
APPLICANT: Cohen, Daniel
APPLICANT: Blumenfeld, Marta
APPLICANT: Chumakov, Ilya
TITLE OF INVENTION: Biallelic markers for use in constructing a high density...
FILE REFERENCE: GENSET.020CP1
CURRENT FILING DATE: 1999-10-20
EARLIER APPLICATION NUMBER: US 09/298,850
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Patent No. 5670634

GENERAL INFORMATION:
APPLICANT: Marotta, Charles A.
APPLICANT: Majocha, Ronald E.
APPLICANT: Majocha, Ronald E.
APPLICANT: Agrawal. Sudhir;
TITLE OF INVENTION: Reversal of Beta/A4 Amyloid
TITLE OF INVENTION: Reptide-Induced Morphological C
TITLE OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match 0.5%; Score 9.8; DB 1;

Sequence 5, Application US/09086621

Patent No. 6521750

GENERAL INDORMATION:

APPLICANT: Hair, Gregory A.

APPLICANT: Hole, Scott D.

TITLE OF INVENTION: Expression Systems

TITLE OF INVENTION UNMER: US/09/986,621

CURRENT APPLICATION NUMBER: US/0124,238

PRIOR FILING DATE: 1998-07-29

PRIOR APPLICATION NUMBER: 60/080,407
                                                                                                                                                                                                                                                                                                                                                       RESULT 778

US-09-179-162A-4/C

US-09-179-162A-4/C

Sequence 4, Application US/09179162A

Patent No. 648501

GENERAL INFORMATION:
APPLICANT: Gildea, Brian D.
APPLICANT: Goull, James M.
APPLICANT: Hyldig-Nielsen, Jens J.
APPLICANT: Fiandaca, Mark, J.
TITLE OF INVENTION: Methods, Kits and Compositions Pertaining To Linear TITLE OF INVENTION: Methods, Kits and Compositions Pertaining To Linear TITLE OF INVENTION WHERE: US/09/179,162A

CURRENT APPLICATION NUMBER: US/09/179,162A

CURRENT FILING DATE: 1998-10-26

NUMBER OF SEQ ID NOS: 10

SOFTWARE: Patentin Ver. 2.1

Sequence 6, Application US/07874334;
Patent No. 5495009

Patent No. 5495009

Patent No. 5495009

TITLE OF INVENTION:
APPLICANT: LIN, KUEL-YING
TITLE OF INVENTION: OLIGONUCLEOTIDE ANALOGS CONTAINING
TITLE OF INVENTION: THIOFORMACETAL LINKAGES
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORLSON & FOERSTER
STREET: 755 Page Mill Road
CITY: Palo Alto
STRATE: California
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OCMPUTER: 19904-1018

COMPUTER: 19904-1018

SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:

### PILING DATE: 19920444

FILING DATE: 19920444
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 9.8; DB 1; Length 14; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 11, Application US/07874334

Sequence 11, Application US/07874334

Patent No. 5495009

GENERAL INFORMATION:
APPLICANT: MATTEUCCI, MARK
APPLICANT: JONES, BOB
APPLICANT: LIN, KUEI-YING
TITLE OF INVENTION: OLIGONUCLEOTIDE ANALOGS CONTAINING
TITLE OF INVENTION: THIOFORMACETAL LINKAGES
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORISON & FOERSTER
STREET: 755 Page Mill Road
CITY: Palo Alto
CITY: Palo Alto
STATE: California
CONTRY: USA
ZIP: 94304-1018
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SUGFWARE: BetentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATE: 19920424
FILING DATE: 19920424
FILING DATE: 19920424
FILING DATE: 19920424
                                                                                                      PRATURE:

LOCATION: replace(6, "")

OTHER INPORMATION: / note= "This position is OTHER INPORMATION: 5-methylcytosine."

PRATURE:

NAME/KEY: misc difference
LOCATION: replace(6..7, "")

OTHER INFORMATION: formacetal linkage."

PERTURE:

NAME/KEY: misc difference
LOCATION: replace(8, "")

OTHER INFORMATION: / note= "This position indicates a CHER INFORMATION: / note= "This position is CHER INFORMATION: / note= "This position is CHER INFORMATION: 5-methylcytosine."

FEATURE:

NAME/KEY: misc difference
LOCATION: replace(8, "")

OTHER INFORMATION: formacetal linkage."

FEATURE:

NAME/KEY: misc difference
LOCATION: replace(10, "")

OTHER INFORMATION: formacetal linkage."

FEATURE:

NAME/KEY: misc difference
LOCATION: replace(10, "")

OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is OTHER INFORMATION: / note= "This position is other information informati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match 0.5%; Score 9.8; DB 1; Length 14; Best Local Similarity 84.6%; Pred. No. 5.4e+02; Matches 11; Conservative 0; Mismatches 2; Indels

NOLECULE TYPE: other nucleic acid

DESCRIPTION: third strand derived from superoxide

DESCRIPTION: dismutase sequence region in Seq ID No. 586124493
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

GENERAL INFORMATION:
Patent No. 6087093
GENERAL INFORMATION:
PAPLICANT: STUVER, LIEVEN
APPLICANT: ECUVAGATE, JOOST
APPLICANT: ECUVAGATE, JOOST
APPLICANT: ROSSAU, RUDI
TITLE OF INVENTION: MUTATIONS IN THE REVERSE TRANSCRIPTASE GENE
INTHE OF INVENTION: MUTATIONS IN THE REVERSE TRANSCRIPTASE
CORRESPONDENCES: 164
CORRESPONDENCES: 164
CORRESPONDENCES:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 8, Application US/08646301A

Patent No. 6194211

GENERAL INFORMATION:
APPLICANT: Richards, Cynthia Ann
APPLICANT: Richards, Cynthia Ann
APPLICANT: Richards, Cynthia Ann
APPLICANT: Huber, Brian E.
TITLE OF INVENTION: Transcriptional Regulatory Sequence of Carcinoembryonic
TITLE OF INVENTION: Antigen for Expression Targeting
FILE REPERENCE: PB1508USW
FILE REPERENT APPLICATION NUMBER: US/08/646,301A
CURRENT PILING DATE: 1996-05-16
NUMBER OF SEQ ID NOS: 25
SOFTWARE: PatentIN Ver. 2.1
SEQ ID NO 8
LENGTH: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                    ·;

                                                             Sequence 2, Application US/09612555

Patent No. 652827

GENERAL INFORMATION:
APPLICANT: Sharma, Vishva M
APPLICANT: Genesan, Kaliannan
TITLE OF INVENTION: Mathod for the Simultaneous Monitoring of Individual
TITLE OF INVENTION: Mathod for Simultaneous Monitoring
FILE REFERENCE: Method for Simultaneous Monitoring
CURRENT FILING DATE: 2000-07-07

NUMBER OF SEQ ID NOS: 13

SEQ ID NOS: 13

SEQ ID NOS: 2

1S-Sequence 53, Application US/09230652A

Patent No. 653775

GENERAL INFORMATION:
APPLICANT: Tournier-lasserve, Elisabeth
APPLICANT: Joucel, Anne
APPLICANT: Bousser, Marie-Germaine
APPLICANT: Back, Jean-Francois
TITLE OF INVENTION: GENE INVOLVED IN CADASIL, METHOD OF DIAGNOSIS AND
FILE OF INVENTION: TARABETICAPION
FILE OF INVENTION: GENE INVOLVED IN CADASIL, METHOD OF DIAGNOSIS AND
FILE REPERENCE: 03715.0048.00000
CURRENT PILING DATE: 1996-08-17
FEARLIER PILING DATE: 1996-08-01
FEARLIER FILING DATE: 1997-04-16
FEARLIER FILING DATE: 1997-04-18
FEARLIER APPLICATION NUMBER: FR 97 04680
